1. Purpose

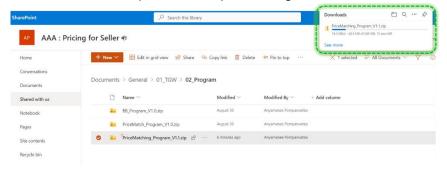

This guide demonstrates how to utilize the Price Matching program to adjust prices based on specific criteria from a master database, as well as how to match prices using data sourced from websites.

2. Pre-requisites

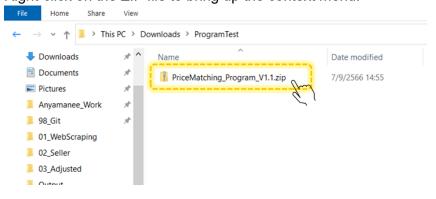

• Click on the link to download the latest version of the ZIP file (Link to Download).

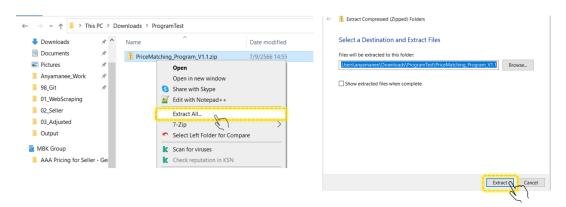

Wait for the download to complete before proceeding.

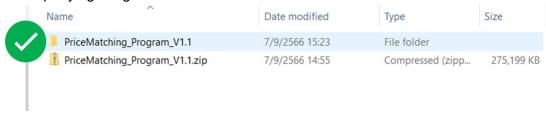

- Move the ZIP file to your selected directory and unpack its contents as steps below.
 - Right-click on the ZIP file to bring up the context menu.

• Select "Extract All." on the context menu and then select "Extract".

 When extraction is complete, will see an unzipped folder, as depicted in the accompanying image.

3. Program Introduction

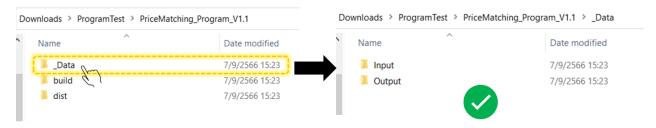

This is a price-matching application in an EXE file that matches market prices. The price information was obtained through web scraping.

PriceMatching_Program.exe

3.1 Data Checking

Before beginning the Price Matching Program, ensure that your data is properly arranged in the relevant input and output folders. This will ensure that your data is processed and exported smoothly.

3.1.1 Input folder

Should have included 4 folders, within the 'Input' folder as shown in the table.

Folder Name	Details		
01_Database	This folder is the primary repository for 3 raw data files. DMS Data File: Contains data sourced directly from the DMS System. This file often has dealership-specific details about vehicles. Website Data File: Data scraped from various online marketplaces or official websites. This provides a snapshot of market prices. Redbook Database File: Comprehensive database from Redbook, detailing vehicle specifications and historical prices		
02_Seller	Information pertaining to individual sellers or dealers. Inventory Data: List of vehicles currently available for sale by the seller, with associated details like price, condition, etc.		
03_Adjusted	Discount and Add-ons List: A detailing any current promotions, discounts, or add-ons that can impact the final adjusted price.		
04_Master	A centralized folder containing master data that are crucial for the program's price matching algorithm.		

Double-check to ensure all the necessary files are present. Remember, the program will use this data for the price-matching process.

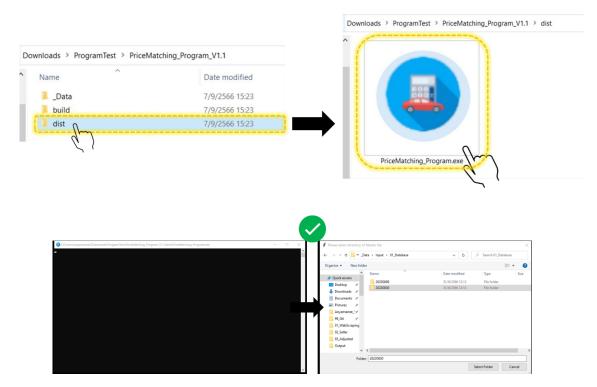

Name	Date modified
01_Database	31/8/2566 12:16
02_Seller	4/9/2566 17:05
03_Adjusted	6/9/2566 14:51
04_Master	30/8/2566 9:36

3.1.2 Output folder

The Output folder is specifically designed to store the results generated by the Price Matching Program. After the program processes the input data, matched or adjusted prices, along with any supplementary details or logs, are saved in this folder. This structure ensures a clear demarcation between raw input data and processed outputs.

4. Instructions

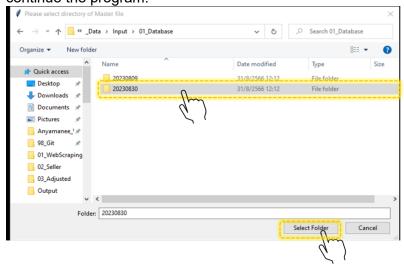

- 4.1 Starting Program
- Double-click the "PriceMatching_Program.exe" file in the "dist" folder. The program
 will start after this step. As it loads, wait a few minutes to show the black window
 and directory window.

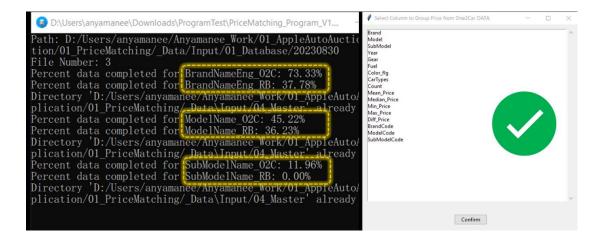

4.2 Input File Selection

4.2.1 Database File

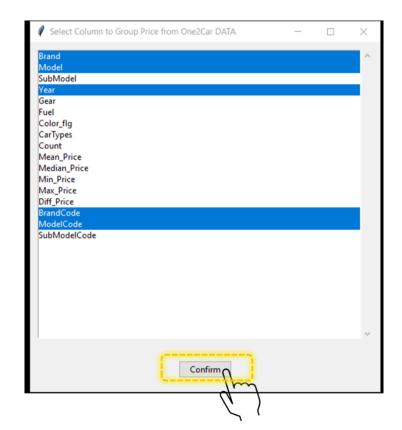

select the path: "\PriceMatching_Program_V1.1_Data\Input\01_Database\ (date latest folder)" from the browser window, and then click "Select Folder" to continue the program.

 If the chosen folder is accurate, a black box indicating the percentage of data that matches Brand, Model, and SubModel will show, along with a column selection window.

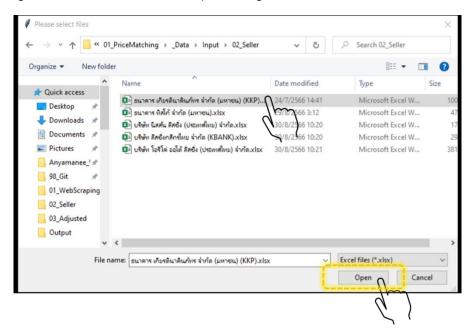

- Select multiple column name(s) that want to use for grouping the pricing Website's data.
- Click the "Confirm" button after making your selection, review it to ensure you've chosen the correct columns.

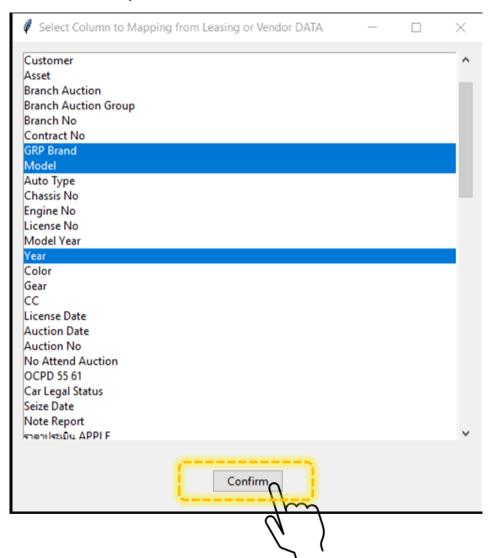

4.2.2 Seller File

The Seller File contains critical data provided by various sellers. This file includes price listings, product details, and other related information that aids in the price matching process. To ensure the accuracy of your price matching results, it's essential to choose the correct Seller File. Below is a step-by-step guide on how to do so.

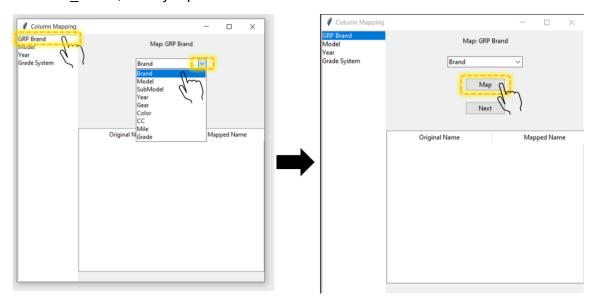

• Select seller file, and click on the "Open" button, usually found at the bottom right of the window. For example, using seller from "เกียรตินาคินภัทร" file.

 Select multiple column name(s) that want to change column name to mapping with DMS file. Then, click the "Confirm" button after making your selection, review it to ensure you've chosen the correct columns.

- Map the column name(s) from the original column name, and then click on the right-side dropdown or field. A list of common column names will be displayed.
- Choose a standard column name that corresponds to the original column's intent and content. For example, if the original column is labeled "GRP Brand," it may equate to the conventional label "Brand".

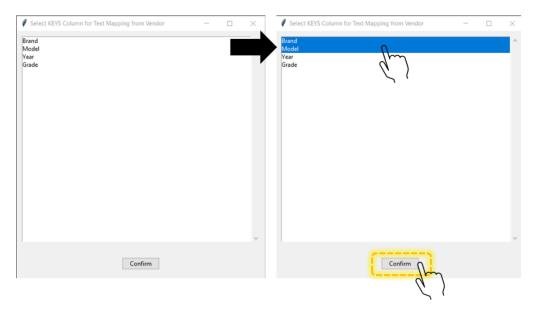

To continue, click "Next" when the mapping is finished.

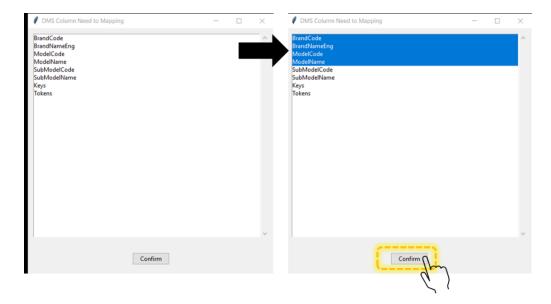

4.2.3 Start Matching File

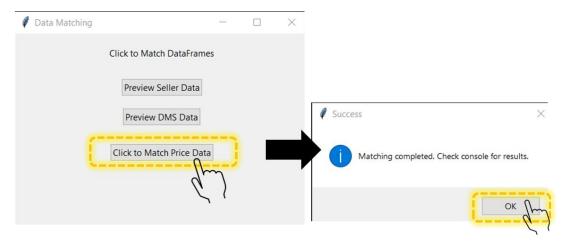

• Choose the columns, <u>click the "Confirm" button</u>. This will initiate the 'Token Extraction' phase to add more accuracy. For example, select the columns labeled Brand and Model.

 Select column name for merging both the wording and the code from the DMS file. Then, click "Confirm" to proceed with the price-matching process. Moving forward, ensure to select both the Brand and Model based on their respective names and codes.

• <u>Click to Match price Data button</u> when matching completed will display window. Then, click "OK" button to next process.

 Select column name and click "Merge Price" button to merge price with seller file.

4.2.4 Adjust Pricing File

• Click "Next" button to select (yyyymmdd)_PriceAdjust.xlsx file.

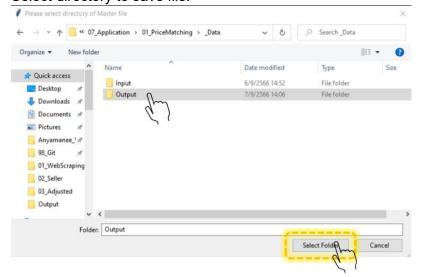

Example of Adjusted Price Template File:

Grade *	Brand *	Model ▼	SubModel •	Discount/Addition •
1	-	-	-	-15
2	-	-	-	-10
3	-	-	-	-5
3.5	-	-	-	-5
99	-	-	-	-20
B2	-	-	-	-25
R	-	-	-	-30
1	TOYOTA	VIOS	-	0
2	TOYOTA	VIOS	-	0
3	TOYOTA	VIOS	-	0
99	TOYOTA	CITY	-	0
R	TOYOTA	CITY	-	0

4.2.5 Saving File

Select directory to save file.

5. Result

In the price matching program, the system will generate a comprehensive result detailing the adjusted prices. This result is derived by comparing your seller data with the master database, factoring in all the priority and mapping specifications you've set.

The output file will typically have the following columns:

Market Price	Price as listed from market price (website).	
Adjusted Price	Price after applying the criteria from the Adjust Pricing File	
Price Status	Indicates if a match was found in the market price data and what criteria were applied.	
Discount/Addition	Discount and Addition to adjust the price from Market Price	
Adjusted Status	Indicates if a match was found in adjust price with master list	
	NEW ADDED
